Setting Up the Inflatable Bounce House

What You Need:

1. Bounce House
2. Bounce House fan
3. People
4. Tarp (only if you are setting up on concrete)

Setting up:

1. Move Bounce House to where you desire to set it up and then remove it from bag.

***Note: paying attention to how the Bounce House was folded up when unrolling it will make it easier for you when trying to roll it back up.***

2. Unroll Bounce House so that it is lying flat and entrance is facing where you want it.
3. Locate the 2 tubes where the fan goes on the opposite side of the entrance.
4. Take the Bounce House fan and strap it down. Tie up the other end by using the strap on the tube.
5. Plug the fan into the generator and hit the on switch. Let it inflate until max size.
6. Stake the bounce house down.

Running the Bounce House:

1. Have 2 people running the Bounce House; 1 letting kids in and 1 watching the kids and make sure the fan does not get knocked over.
2. Let in between 4-6 kids depending on size and weight.
3. You can determine the appropriate time the kids spend in the bounce house.

***Note: If it begins to rain, turn off the fan and cover the bounce house with a tarp ASAP.

Take Down:

1. Sweep out the Bounce House and then remove the stakes.
2. Make sure all the kids are out of the Bounce House and then remove the fan and untie the other tube so that the house can deflate.
3. Let the Bounce house deflate by itself for at least five minutes before attempting to roll up.
4. Once deflated, fold the Bounce House into thirds with the tubes sticking out at the one end and the entrance at the other.
5. Starting at the entrance, have 2 or 3 people role up the Bounce House. You may have to do this twice because of the air.
6. Place the Bounce House back in bag. If it does not fit you will have to refold and reroll it until it does.
